

## Legendair Ventilator Client Version

### To make Parameter changes:

1. Highlight the parameter you want to change with the black box on the left of the parameter using the up/down arrow keys
2. Press the check mark (+/-) sign appears beside the parameter to be changed and the parameter flashes
3. Using the up/down arrow, adjust to your desired setting
4. Press the check mark key to accept the change (must be done within 7 seconds or the parameter reverts to its previous setting)

Filters to use: ID # 308; white side faces out, all sides must be fully inserted into the air intake area

Power Supply: A/C, D/C

internal battery (length of time depends on ventilator settings-4-6hrs generally)

- Displayed as a battery symbol in the top middle of the display screen in % of battery life remaining
- **\*\*NEVER ALLOW THE INTERNAL BATTERY TO GO BELOW 20% FOR CLIENT SAFETY\*\***
- Device must be immediately plugged in at 20% to an external power source and left in "Standby Mode"
- Battery takes 8hrs to recharge

Proper placement of air inlet Filter

Humidifiers: heated humidifier with bedside set up; a Heat Moisture Exchanger is used with chair set up when **no** Passy Muir Speaking Valve is in use

Alarms: The only two alarms PROP routinely sets are high pressure and low pressure

To Start Ventilation: press the Start/Stop key on the bottom left corner of the unit. The blue LED light above it will turn off.

To Stop Ventilation: press and hold the Start/Stop key for 3 seconds and release key when prompted. Blue LED light will turn on to indicate the vent is in “standby mode”.
